Banish Draras - Arduino

Our program is here to banish Draras from your Pecan trees.

Description

To use the system all you need to do is to connect the Arduino to your computer. The Banish Draras will recognize a movement of draras in the distance of 2 meters and will execute several actions to keep them away! The system set a noise and red light alarm to scare and banish the evil draras that hunt the garden of our dear Or Novak Rinat. In addition, a robotic hand will be connected to Servo to scare the draras from getting close from the pecan trees.

Dependencies

• Arduino IDE

Installing

For further information, use the link attach below-
https://docs.arduino.cc/software/idev2/tutorials/getting-started/ide-v2-downloading-and-installing

Executing program

- Open the Arduino IDE Program → click "file" → click "open" → choose the file from the relevant folder on your computer → connect the Arduino Uno device by USB → click "verify" button ->click "Upload" button

Help

• The banish draras has small and moving parts so keep far and save infants and children away.

- Furthermore, it is important to note that there are certain load noises and flickers present.
